

## OFFICE OF SCIENCE & TECHNOLOGY

### Bomb Suit Standard

#### ***Project Description:***

In the process of developing and testing a chemical and biological ensemble for the MedEng SRS-5 Bomb Suit, NIJ determined that there was no standard quantifying state and local performance requirements, against which bomb suits could be evaluated. The Office of Law Enforcement Standards (OLES) determined that the U.S. Army has developed preliminary performance requirements for the bomb suits used by military Explosive Ordnance Disposal specialists. Using these performance requirements as a point of departure, OLES working with the US Army's Soldier Biological Chemical Command, will develop a performance standard suitable for civilian public safety application.

**MedEng SRS-5 Bomb Suit**

---

#### ***Status:***

This project was initiated in 2002. A multi-agency technical team has been established. Standards expected to be published in FY 04'
